

What Are the Chances of Dying in a Car Accident?

A Louisiana crash risk + evidence toolkit (general information, not legal advice).

How to Read the Statistics

Risk numbers are averages across millions of trips. They help you compare patterns, but they cannot predict what will happen in one specific crash.

- Per 100 million miles: a road-safety rate that changes year to year.
- Lifetime odds: a rough estimate using population and life expectancy.
- State rates: useful for trends, not proof of fault in your case.

First 72 Hours Evidence Checklist

If you can do these safely, they protect you from missing-photo and missing-record problems later.

- Take wide and close photos of vehicle damage, skid marks, and traffic controls.
- Write down names and phone numbers for witnesses before people leave.
- Save the crash report number and the towing/storage information.
- Back up phone photos and videos, and do not edit the originals.
- Start a short symptom and activity log, even if symptoms come later.

Insurance Pressure: What to Do and What to Avoid

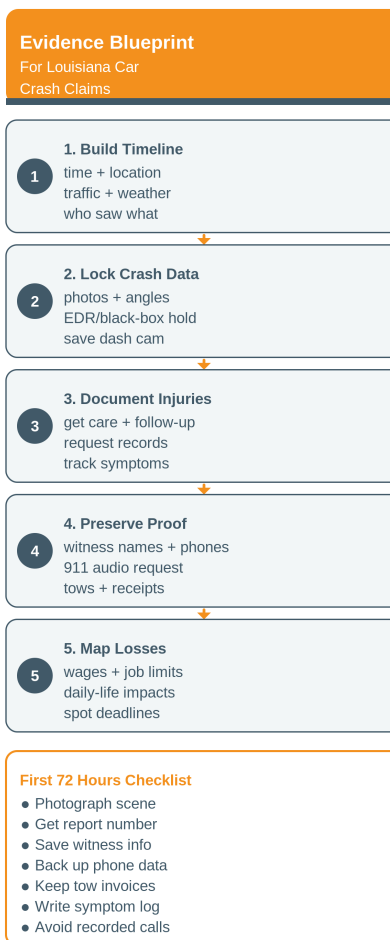

- Do: give basic facts and get claim numbers in writing.
- Do: ask who the adjuster represents and what coverage applies.
- Avoid: recorded statements before you understand the questions.
- Avoid: signing a release until you know the full scope of losses.

Risk Terms Cheat Sheet

Term	Plain Meaning
Fatalities	Count of people killed in crashes in a time period.
Fatality rate	Deaths per miles traveled or per population; used to compare trends.
Comparative fault	How responsibility can be shared between drivers under Louisiana law.

Evidence Blueprint (Quick Reference)

Five steps + a first-72-hours checklist you can print.

Defense Vs Evidence (Quick Reference)

Common defense angles and the records that answer them.

Defense Vs Evidence Common Insurance Angles And Proof	
Common Defense	Evidence Anchor
Low damage claim so risk was low	photos + angles EDR speed change crush + intrusion
No ambulance so you were ok	ER/urgent notes treatment timeline pain/symptom log
Normal imaging so nothing broke	radiology report follow-up exams specialist notes
You caused it comparative fault	video + witnesses scene diagram phone records
Quick settlement before you know the full picture	written requests loss docs + bills limits + coverage

Free Case Review (Louisiana)

Babcock Injury Lawyers | Stephen Babcock | (225) 500-5000

If you were in a serious crash, the evidence clock starts immediately. Our focus is fast evidence preservation, clear documentation, and trial-ready preparation when the facts require it.

What We Do First

- Identify the best proof sources early: photos, EDR data, videos, witnesses, and records.
- Spot deadlines and send preservation letters to protect crash data and files.
- Handle insurer communications so you do not get boxed in by early statements.
